

A METHOD AND APPARATUS FOR NETWORK INITIATED
EVENT REMINDER ALERTING

ABSTRACT OF THE DISCLOSURE

[0071] This invention relates to a method and apparatus for network initiated event reminder alerting. More particularly, the invention is directed to a system to provide network components that initiate an event reminder call prior to an upcoming event to alert a mobile subscriber of the event such as an appointment or a meeting. The network supports the provisioning of a user defined event list and corresponding reminder data for alerting the subscriber prior to each event. The network monitors the event schedule and takes appropriate action.
